

EDUCATION

Arizona State University | Master of Science in Computer Science | **GPA: 3.6/4.0**

Tempe, AZ, USA

Coursework: Data Mining, Project Management, Software Security, Semantic Web Mining

August 2024 – May 2026

Visvesvaraya National Institute of Technology, Nagpur | B.Tech in Computer Science

Nagpur, India

Coursework: DSA, CN, OS, AI, ML, DBMS, Business Intelligence, System & Network Security

July 2019 – May 2023

WORK EXPERIENCE

Software Engineer @ Wells Fargo - Bangalore, India

August 2023 – August 2024

- Built core components for a **real-time performance analysis dashboard** using **React.js** and **REST** architecture, cutting decision turnaround time by **35%** for cross-functional teams of **20+ analysts**.
- Developed and maintained **server-side REST APIs** using **Java** and **Node.js**, handling **500K daily requests** across critical loan eligibility and customer authentication systems with **99.9% uptime**.
- Designed an **automation test suite** using **TestNG** with Java alongside CI/CD pipelines powered by **Jenkins**, cutting manual QA hours by **60%**.
- Optimized **SQL queries** across distributed databases, achieving a **15% reduction in runtime** and migrating **30 services** to **Azure serverless endpoints**, cutting compute costs by **22%**.
- Diagnosed and resolved **API key authentication failures** in production using **Splunk** and **AppDynamics**, tracing bad-request patterns across logs and downstream services to restore access for impacted consumers.

Software Engineering Intern @ Shiprocket - New Delhi, India

June 2022 – August 2022

- Developed and deployed an **automated billing system** using **PHP**, **Laravel**, and **AWS services (Lambda, S3)**, cutting invoice processing time from **45 seconds to under 8 seconds** and handling **50K invoices/day** at peak.
- Integrated an **ML-driven dynamic pricing engine** using **CatBoost Classifier** to predict shipping costs with **92% accuracy**, lifting per-shipment margin by **12%** across the carrier network.
- Collaborated with backend engineers across **4 product squads** to align frontend workflows with API contracts and feature requirements, shipping **15+ features** during the 12-week internship.
- Presented architecture and pricing insights to **senior leadership**, influencing a long-term pricing strategy projected to drive **\$360K in annual margin uplift**.

TECHNICAL SKILLS

Languages: C/C++, Python, Java, JavaScript, TypeScript, C#, SQL, HTML/CSS, Rust, Dart, Bash, Swift, Kotlin, Perl

AI & Machine Learning: TensorFlow, PyTorch, Keras, Scikit-learn, CatBoost, Pandas, NumPy, Matplotlib, SciPy, OpenCV, spaCy, LangChain, Plotly, Hugging Face, OpenAI, Google Gemini, LLM Integration

Frameworks & Libraries: React, Node.js, Express, Next.js, Flutter, Tailwind, Spring Boot, FastAPI, Django, Flask, .NET

Cloud & DevOps: AWS (Lambda, S3), GCP, Firebase, Docker, Kubernetes, Terraform, Jenkins, Apache Kafka, Hadoop

Databases & Tools: MySQL, PostgreSQL, MongoDB, Redis, SQLite, BigQuery, FAISS, MLflow, Streamlit, Selenium, Pytest, Vite, Git, GitHub, Postman, Jira, Agile/Scrum, IntelliJ, Linux, Microsoft Office, Expo

PROJECT WORK

Civic Pulse | *Python, React 18, Tandemn AI, Mapbox GL JS, FastAPI, Cerebras SDK, OpenStreetMap, Modal* | **May 2026**

- Developed a **neighborhood sustainability rating platform** that scores communities **1–10** across **12+ environmental, infrastructure, and livability signals**, paired with a **low-carbon AI chatbot** that displays a live per-message CO₂ savings counter.
- Surfaced neighborhood-level sustainability gaps in **under 30 seconds** via Tandemn AI APIs running on refurbished GPUs powered by a cleaner grid, cutting inference emissions by **65%** versus standard cloud providers.

Thread Forge | *Next.js, React, Python, MongoDB, Gemini 2.5 Flash, discord.py, Tailwind, GitHub Webhooks* | **March 2026**

- Built an **AI-powered project management tool** that monitors Discord conversations, auto-generates role-matched task proposals, and closes Kanban cards automatically upon matching GitHub commits.
- Eliminated the manual triage layer between team chat and project boards across **16+ engineering specialties**, ensuring every action item is captured, assigned, and tracked without leaving Discord.

Solace (Chrome Extension) | *JavaScript, Chrome Extensions (Manifest V3), Gemini Nano, Web Speech API, Mozilla Readability, Chrome Storage API, CSS3* | **June 2026**

- Shipped a **privacy-first Chrome extension** delivering **15+ accessibility features** including dyslexia-friendly fonts, color-vision assist, reading ruler, and word-by-word TTS, with **on-device AI** for summarization, simplification, and translation into **8 languages** at zero cost.
- Replaces paid tools like Read&Write, Speechify, and Helperbird, saving users **\$120–180/year** with a single free extension.

Vox Verify | *Python, PyTorch, Torchaudio, Wav2Vec2, Hugging Face Transformers, FastAPI, ONNX* | **April 2024**

- Honorable Mention at Wells Fargo Hackathon (2024)** – Fine-tuned a pre-trained audio model on **13,000+ samples** to distinguish human voices from **six AI-generated types** including DiffWave, WaveNet, MelGAN, WaveGrad, WaveRNN, and Parallel WaveGAN, achieving **99.8% validation accuracy**.

NOTABLE ACHIEVEMENTS

- Winner of the Spotlight Award** at [Wells Fargo](#) for contributions to **ADEPT**, recognizing teamwork and impact.
- Recipient of **Graduate College University Scholarship** for academic excellence at [ASU](#) in **Spring 2026** semester
- Worked with [Cisco](#) at the age of **16** as part of their **Talent Outreach Program** during high school
- Served as the **Secretary** at the [ACM Student Chapter, VNIT](#)
